

HMP Elements®: SIP Platform

Raising the Bar on VoIP Deployment

More and more, businesses are looking to deploy their voice applications completely using Voice over IP, both for ease and cost-efficiency. HMP Elements enables you to run your Voice Elements-based voice solutions on your own server via SIP.

In addition, HMP Elements can scale very easily, handling anywhere from 2 to hundreds of channels per server. HMP Elements is included in our Voice Elements Platform and is very reasonably priced per port.

The ultimate way to deploy a Voice Elements application is using our SIP Platform, HMP Elements. Why?

- Running your telephony application via Voice over IP in an all-software server means serious cost savings.
- HMP Elements maintains the highest call progress analysis (CPA) accuracy in the industry, offering users frustrated with competing products a reliable and powerful platform to perform outbound applications.

HMP Elements employs SIP (Session Initiation Protocol), an application-layer control protocol that can establish, modify, and terminate multimedia communication sessions such as voice calls over Internet Protocol. In addition, HMP Elements uses Host Media Processing instead of expensive and outdated telephony hardware.

This combination is the groundwork for developers to build any voice application.

SUPPORTED

Support for Windows 7 (32 and 64-bit), Server 2008 and Virtual Machines are already included.

VOICE ELEMENTS INCLUDED

HMP Elements is bundled with our Voice Elements Platform, combining a robust development tool with a powerful SIP platform all in one product.

Try out HMP Elements with Voice Elements for free and you'll be able to make your first call in minutes. Demo includes sample apps to quickly start your own solution.

Telephony Bank Hosting

No Equipment, No Hassle

The Inventive Labs Telephony Bank is a group of resource servers that allow a Voice Elements-based application to run at a customer site with internet access, using the voice resources remotely.

It is a simple monthly service based on the resource usage of an application, and allows you to focus on developing your voice solution rather than configuring servers and hardware.

YOUR CHOICE

Inventive Labs will also host your full voice application at our location. Use our telephony resources or get full-service hosting...your choice.

TRY IT OUT

The Voice Elements Demo is connected for free to our Telephony Bank for 30-days. Try out our service today.

For more information on any of our products or services please visit us on the Web at:
www.VoiceElements.com

Our Telephony Bank Service not only provides an easier route to deployment, but also provides piece of mind that all equipment, servers, etc. are fully supported and maintained.

This option works well for businesses that have the .NET talent to write a voice application but don't have the resources or desire to maintain application servers, configure either VoIP or traditional telephone lines or don't want a large upfront cost to procure the needed equipment.

Telephony Bank customers simply purchase the \$99 Voice Elements toolkit, customer set-up fee, and pick a monthly plan that best meets their per minute usage estimates. The price goes down the more minutes are used and can be as low as 8 cents per minute.

Telephony Bank allows you to use our servers and resources (phone lines, voice resources, 800 numbers, etc.) from any server over the internet.

Support is included for free for all Voice Elements developers that use the Telephony Bank.
